

Screw Conveyor

Description:

- Screw conveyor is the most basic form of conveying, simply moving material from one place to another. Screw conveyors commonly handle reasonably dry to sludge type materials. All screw conveyors require that the feed into the inlet be controlled. The screw diameter, screw speed, and the housing loading determine the through put capacity of a screw.

Features:

- Mild steel or stainless steel materials available
- Suitable for horizontal/inclined conveying bulk, particles or powder materials
- The length can be designed according to the requirements.
- Rotation direction with left rotating, right rotating and left-right rotating and so on.
- Flexible design with one inlet/one outlet or more inlet/one inlet
